Heart failure (HF), often referred to as cardiac failure or congestive heart failure (CHF), occurs when the heart is unable to pump sufficiently to maintain blood flow to meet the body's needs. A lot of health conditions contribute to heart failure. These include coronary artery disease, myocardial infarction also known as heart attack, high blood pressure, valvular heart disease, alcoholism, cardiomyopathy and atrial fibrillation. These heart conditions contribute to heart failure by altering either the anatomy or physiology of the heart. Heart failure is a common, costly, and potentially fatal condition. About 40 million people were affected globally in 2015. In developed countries, around 2% of adults have heart failure and in those over the age of 65, this increases to 6-10%. In the year after diagnosis, the risk of death is about 35% after which it decreases to below 10%. Five percent of emergency hospital admissions in the United Kingdom is associated with this disease. The book "HEART FAILURE PREVENTION & TREATMENT," as the name implies, discusses this health condition in details. It begins with a detailed explanation of the anatomy and physiology of the cardiovascular system (comprising the heart and the blood vessels), before proceeding to the disease condition. This will enable the reader to have a firm grasp of heart failure. HEART FAILURE PREVENTION & TREATMENT is written in simple English, with detailed explanation of medical terms to allow for easy comprehension by readers in the non-medical field. We hope that our readers will find this book a very useful tool in the war against the menace of cardiac failure. In this revised edition of their bestselling book, the authors provide a comprehensive character education framework designed to help primary school administrators, educators, and concerned citizens organize, implement, and assess character education programmes in their schools. The authors propose many new ideas, suggestions, and promising practices that may be personalized to fit the needs and interests of a school, community, and children and youth. These include tips for leaders on how to involve all stakeholders and how to reach consensus, steps for developing a values curriculum, and strategies for instruction and staff development. Mention the term "heart disease" and most people picture an overweight, middle-aged man. Yet the reality is that heart disease is the number one killer of women in North America,

accounting for a third of all deaths in women and far surpassing the prevalence of breast cancer. Cardiologist Dr. Martha Gulati and holistic pharmacist Sherry Torkos separate the facts from the many myths surrounding heart disease and offer the latest information on both the conventional medical approach and the role of natural medicine in understanding this illness. Saving Women's Hearts examines the unique gender differences for women and provides valuable insight into the screening procedures, diagnosis, treatment options, and most importantly, prevention of heart disease. Written by the leading experts in this field, this practical guide covers: How the heart works and the various types of heart disease Why heart disease is different and unique for women The known and emerging risk factors for heart disease What you need to know about tests and screening procedures Medications - the good, the bad, the ugly, the noteworthy Nature's Pharmacy - the role of vitamins and other supplements Nutritional strategies for better heart health The latest exercise guidelines for women The impact of stress and practical tips on managing stress The role of sleep and heart health And much more... The New York Times bestselling guide to the lifesaving diet that can both prevent and help reverse the effects of heart disease Based on the groundbreaking results of his twenty-year nutritional study, Prevent and Reverse Heart Disease by Dr. Caldwell Esselstyn illustrates that a plant-based, oil-free diet can not only prevent the progression of heart disease but can also reverse its effects. Dr. Esselstyn is an internationally known surgeon, researcher and former clinician at the Cleveland Clinic and a featured expert in the acclaimed documentary Forks Over Knives. Prevent and Reverse Heart Disease has helped thousands across the country, and is the book behind Bill Clinton's life-changing vegan diet. The proof lies in the incredible outcomes for patients who have followed Dr. Esselstyn's program, including a number of patients in his original study who had been told by their cardiologists that they had less than a year to live. Within months of starting the program, all Dr. Esselstyn's patients began to improve dramatically, and twenty years later, they remain free of symptoms. Complete with more than 150 delicious recipes perfect for a plant-based diet, the national bestseller Prevent and Reverse Heart Disease explains the science behind the simple plan that has

drastically changed the lives of heart disease patients forever. It will empower readers and give them the tools to take control of their heart health. Congenital heart disease (CHD) is a problem with the structure and function of the heart that is present at birth and is the most common type of birth defect (PubMed Health). This comprehensive guide offers a step by step approach to the diagnosis and management of different types of CHD, at different stages of life. Beginning with an introduction to the development of the foetal cardiovascular system and genetic, the following section discusses the basics of heart examination, radiography and terminology. Each section progresses through different conditions and examines the transition of care into adulthood and long term issues facing adults with CHD. Key points Comprehensive, step by step guide to congenital heart disease (CHD) Covers diagnosis and management of CHD disorders at all stages of life Internationally recognised author and editor team Includes more than 1000 full colour images and illustrations Heart failure is the only cardiovascular disease that is increasing. The impact on the critical care environment and the health care system, as a whole, is significant from both a cost and burden to the system perspective. There are 6.5 million hospital days a year and nearly \$40 billion dollars in yearly health care costs attributed to heart failure in the United States. There are more Medicare monies spent for diagnosing and treating heart failure than any other Diagnosis Related Group. There is a 24% hospital re-admission rate for this diagnosis which leads to financial implications for health care systems. The human cost is also significant. Less than half of Americans diagnosed with heart failure survive greater than 5 years. The ongoing health care needs and cost of this chronic disease takes a significant toll on patients' finances, time and quality of life. Over \$2.9 billion dollars is spent annually on the pharmaceutical management of heart failure in the United States. This diagnosis is the leading cause of hospitalization for patients who are 65

years of age and older. Few health care providers in the critical care environment are not affected by heart failure on a routine basis. Caring for these patients and their families is both a challenging and yet a rewarding experience. This edition will provide critical care nurses with a comprehensive heart failure review which is essential in caring for this challenging population given the dynamic health and critical care environments. Love, compassion, and peace - these words are at the heart of all spiritual endeavors. Although we intuitively resonate with their meaning and value, for most of us, the challenge is how to embody what we know; how to transform these words into a vibrant, living practice. In these times of conflict and uncertainty, this transformation is far more than an abstract ideal; it is an urgent necessity. Peace in the world begins with us. Merwin and Galway Kinnell to the haiku of Issa and the great poet-monk Ryokan, from the luminous aspirations of Saint Francis of Assisi to the sage advice of Thich Nhat Hanh and the Dalai Lama. In the United States, there are approximately 1 million adults with congenital heart disease, with 20,000 new patients reaching adolescence each year. Therefore, the number of adult CHD (ACHD) patients will continue to rise. In fact, it is now estimated that for the first time in history, there are more adults living with CHD than children.
