Description Coming Soon! Description Coming Soon! This book gathers international and national reports from across the globe on key questions in the field of antitrust and intellectual property. The first part discusses the application of competition law to online sales platforms, which is increasingly a focus for anti-trust authorities around the world. A detailed international report explores which are the major challenges for competition law generated by the growth of online platforms. It provides an excellent comparative study of this complex and challenging subject. The second part of the book gathers contributions from various jurisdictions on the topic "To what extent do current exclusions and limitations to copyright strike a fair balance between the rights of owners and fair use by private individuals and others?" This section presents an international report, which offers an unparalleled comparative analysis of this topic, bringing together common themes and contrasting the various national provisions dealing with exceptions to copyright, amongst other things. The book also includes the resolutions passed by the General Assembly of the International League of Competition Law (LIDC) following a debate on each of these topics, which include proposed solutions and recommendations. The LIDC is a long-standing international association that focuses on the interface between competition law and intellectual property law, including unfair competition issues. Dealing with rights and developments at the margin of classic intellectual property, this fascinating book explores emerging types of regulations and how existing IP regimes inform and influence the judicial and legislative creation of "substitute" IP rights. Law school casebook that covers the law of intellectual property and unfair competition. The casebook provides the tools for fast, easy, on-point study. Part of the University Casebook Series; , it includes selected cases designed to illustrate the development of intellectual property law. Text and explanatory materials designed for law study accompany the cases. "...[A] well-written work that will be of untold value to the lawyer advising her author-client and to the law researcher seeking to unravel the tangled web of legal protection for fictional characters..." *Law Books in Review* The rapid evolution of China from an emerging to a mature intellectual property jurisdiction has far-reaching implications for the law, policy and practice of IP, and their links with competition and technology law. Produced in the year China rose to fourth rank globally as user of the international patent system, this volume is an invaluable guide for the policymaker, the analyst and the practitioner alike, setting a thorough exposition of the substantive law and its application within a broader policy context, and offering a comprehensive, timely overview of an IP system just at the time it begins to assume central significance on the world stage. Antony Taubman, Director, IP Division, WTO This edited volume offers an excellent comprehensive overview of China's intellectual property and technology laws. The eminent contributors to this volume have played important roles in shaping China's IP system and in tackling the many challenges confronting it. By making their views of the system readily accessible to an English audience, this volume will undoubtedly add to our understanding of the legal protections and challenges facing innovation industries in China. Mark Wu, Harvard Law School, US The pioneering studies in this book examine the fundamental role of intellectual property and technology laws as China is moving from made in China to created in China. This book also helps us to understand about the interplay between China's intellectual property protection system and the potential for transition of China's economy, and provides numerous means to deal with the legislative difficulties in China's innovation-oriented strategy. Wu Handong, Zhongnan University of Economics and Law, China Written by some of China's leading academic experts and with a foreword by the former Chief Justice of the IP Tribunal of China's Supreme People's Court, this book combines for the very first time a review of both Chinese intellectual property and technology laws in a single volume in English. The book initially focuses on recent amendments to the laws of copyright, trademarks, patents, before moving on to discuss unfair competition and trade secrets, and the protection of intellectual property over electronic networks. Other chapters cover the regulation of digital networks and

telecommunications; IT and E-commerce; the new antimonopoly law and competition; and China's position on the TRIPS agreement. Of special note is a chapter written by in-house Counsel and the Chairman of the Quality Brands Protection Committee (a coalition of well known multinational brands) reviewing both brand protection and practical enforcement of intellectual property in China. This book will appeal to scholars and postgraduate students in commercial law (especially in IP, trade, competition, and technology), Chinese studies and business, as well as regulators, international agencies and law firms. Management consultancy and accounting firms, banks and investment firms will also find this book invaluable. This volume is for students and scholars of intellectual property law, practitioners seeking creative arguments from across the field, and policymakers searching for solutions to changing social and technological issues. The book explores the tensions between two fundamentally competing demands made of IP law. This book addresses two crucial concerns of intellectual property owners--how to recover monetary compensation when an infringement has occurred and how to prevent further infringement.

**ESSENTIALS OF TRADEMARKS AND UNFAIR COMPETITION** Full of valuable tips, techniques, illustrative real-world examples, exhibits, and best practices, this handy and concise paperback will help you stay up to date on the newest thinking, strategies, developments, and technologies in trademarks and unfair competition. "This is an extremely well-conceived, clearly written, and authoritative presentation of several related intellectual property disciplines. It will be valuable both to business executives and nonspecialized lawyers. Serious readers should get up to speed rapidly because Ms. Shilling focuses on the real issues in an effective, user-friendly manner." —Robert Goldscheider, Chairman, The International Licensing Network "Dana Shilling has written a work that should be the new, first stop for junior associates or experienced general practitioners alike delving into their first serious engagement with the law of trademark and unfair competition. In a terse but accessible style she has touched on most of the major issues in these developing areas and has done so with a minimum of jargon, 'inside baseball,' and bias in an area rife with vested litigation and economic interests. No other book presently available fits quite this niche." —Ronald D. Coleman, Partner, Intellectual Property Department, Gibney, Anthony & Flaherty LLP

The Wiley Essentials Series—because the business world is always changing...and so should you. Intellectual property law and practice in China has changed dramatically since the first edition of this influential book published in 2005. Today, judicial and administrative application of law plays a major role, and accordingly this entirely rewritten new edition draws on an abundance of court and administrative decisions clarifying how the law is applied. In a thorough and systematic manner, the authors clearly demonstrate the sophisticated level of legal certainty available for domestic and foreign entities doing business in China, including the adaptation of the legal framework to new technologies, broadened scope of protected subject matter, improved quality of filings, and significant enhancement of enforcement not only with regard to remedies but also to procedural aspects. Providing comprehensive coverage of all aspects of intellectual property protection in China – including analysis of IP-related provisions of China's new Civil Code – the book emphasizes issues of concern to foreign traders and investors such as the following: copyright law and software protection; protection of trademarks, including Chinese character and Roman script trademarks, well-known marks and bad faith applications; technology transfer; enforcement of trade secret and patent protection; criminal liability for infringement; unfair competition and antitrust law; role of the binding interpretations of the Supreme People's Court; administrative regulations that supplement the laws; co-operation with administrative authorities; protection of geographical indications; protection of trade names; domain name dispute resolution; special patent-related laws protecting such areas as plant varieties, integrated circuit layout designs,; and relevant provisions of the distinct laws of Hong Kong and Macao. Full descriptions of the competencies of China's IP-related institutions are included with detailed attention to procedural matters. Brief historical notes in each chapter feature the most significant changes in each amendment of law and regulation. Because in China the laws are supplemented and interpreted by numerous guidelines and circulars issued by ministries or courts, the up-to-date knowledge and awareness provided in this new edition is essential for all companies investing in China or considering such investment, as well as for practitioners counselling their clients on strategies. In addition, officials and policymakers involved in trade or other relations with China will benefit from a comprehensive update of what the current law is and a critical view of what the challenges are. An excellent text for clients to read before meeting with attorneys so they'll understand the fundamentals of patent, copyright, trade secret, trademark, mask work, and unfair competition laws. This is not a "do-it-yourself" manual but rather a ready reference tool for inventors or creators that will generate maximum efficiencies in obtaining, preserving and enforcing their intellectual property rights. It explains why they need to secure the services of IPR attorneys. Coverage includes employment contracts, including the ability of engineers to take confidential and secret knowledge to a new job, shop rights and information to help an entrepreneur establish a non-conflicting enterprise when leaving their prior employment. Sample forms of contracts, contract clauses, and points to consider before signing employment agreements are included. Coverage of copyright, software protection, and the Digital Millennium Copyright Act (DMCA) as well as the procedural variances in international intellectual property laws and procedures.

**Modern Intellectual Property Law, 6th Edition**, is a cutting edge casebook that tackles major issues from the rise of social media and the computer industry to the changing nature of unfair competition law. It features cases involving the giants of our age such as Apple, Amazon.com, Microsoft, Facebook, Google, LinkedIn, and YouTube. It also covers the major changes in the patent law with the American Invents Act and unique trademark cases such as those involving Christian Louboutin shoes. In addition to fascinating cases and interesting statutes, **Modern Intellectual Property Law, 6th Edition** provides interviews with intellectual property creators to illustrate major issues.

**Black Letter Outlines** are designed to help a law student recognize and understand the basic principles and issues of law covered in a law school course. **Black Letter Outlines** can be used both as a study aid when preparing for classes and as a review of the subject matter when studying for an examination. Each **Black Letter Outline** is written by experienced law school professors who are recognized national authorities in their subject area. This publication provides an unparalleled comparative analysis of two "hot topics" in the field of antitrust and unfair competition laws with regard to a number of key countries. The first part of the book examines whether small and middle-sized businesses could or should be subject to specific competition rules. These businesses account for 99% of the enterprises in Europe and the United States, making this a particularly important topic. The papers consider both the public and private enforcement rules across a range of jurisdictions and a detailed international report, prepared by Michele Carpagnano, identifies general trends and highlights differences and the most interesting features of national regulations. The second part of the book gathers contributions from various jurisdictions on the unfair competition question of whether a company could or should be protected against the use of their trademark, distinctive signs and other components of their image and identity on the part of non-competing companies. The papers focus on the fundamental issue of the competitive relationship as a condition of protection under unfair competition acts

and the connection to intellectual property protection. The comprehensive and insightful international report, prepared by Martine Karsenty-Ricard, brings together these reflections by comparing various national positions. The book also includes the resolutions passed by the General Assembly of the LIDC following a debate on each of these topics, which include proposed solutions and recommendations. The International League of Competition Law (LIDC) is a long-standing international association that focuses on the interface between competition law and intellectual property law, including unfair competition issues. The fast-evolving relationship between the promotion of welfare-enhancing competition and the balanced protection of intellectual property (IP) rights has attracted the attention of policymakers, analysts and scholars. This interest is inevitable in an environment that lays ever greater emphasis on the management of knowledge and innovation and on mechanisms to ensure that the public derives the expected social and economic benefits from this innovation and the spread of knowledge. This book looks at the positive linkage between IP and competition in jurisdictions around the world, surveying developments and policy issues from an international and comparative perspective. It includes analysis of key doctrinal and policy issues by leading academics and practitioners from around the globe and a cutting-edge survey of related developments across both developed and developing economies. It also situates current policy developments at the national level in the context of multilateral developments, at WIPO, WTO and elsewhere. Description Coming Soon! This book gathers international and national reports from across the globe on key questions in the field of antitrust and intellectual property. The first part discusses the allocation of liability for infringement of antitrust laws between corporations and individuals. The book explores the criminal or administrative sanctions available against corporations, companies or group of companies, and individuals, such as employees or directors. A detailed international report explores the major trends and challenges in this field and provides an excellent comparative study of this complex and challenging subject. The second part examines whether intellectual property rights are sufficiently protected to ensure a fair return on investments made by manufacturers and distributors. This question comes at a time where distribution is facing deep and radical changes with the Internet. To what extent this is an opportunity or a threat to the sustainability of distribution systems of differentiated and IP protected goods is the question. This book brings together the current legal responses across a number of European countries and elsewhere in the world, all summarised and elaborated in an international report. The book also includes the resolutions passed by the General Assembly of the International League of Competition Law (LIDC) following a debate on each of these topics, which include proposed solutions and recommendations. The LIDC is a long-standing international association that focuses on the interface between competition law and intellectual property law, including unfair competition issues. Written in the context of China's new intellectual property laws after WTO entry, this unique law-and-commentary guide examines the legal framework for intellectual property protection and its practical implications in the commercial world. Written for multinationals with operations in China, the book addresses the commercial realities of protecting and managing intellectual property and the practical application of Chinese intellectual property laws to business, e.g., assessing risk liabilities for all parties in the supply chain, from manufacturers to retailers, to marketing firms and importers. Among the overarching topics treated are the following: Trademarks Copyright Patents Enforcement of intellectual property rights Trade secrets Internet Technology transfer Unfair competition With key legislation, cases, and judicial interpretations and cases, China Intellectual Property Law Guide has no peers as a working reference for corporate counsel and the busy IP lawyer alike. This title forms part of the Asia Business Law Series. The Asia Business Law Series is published in cooperation with CCH Asia and provides updated and reliable practical guidelines, legislation and case law, in order to help practitioners, policy makers and scholars understand how business is conducted in the rapidly growing Asian market. This book was originally published by CCH Asia as the loose-leaf China IP Law Guide Unlike patents and copyrights, there is very little in the way of international standards or harmonization in trade secrets law. Nonetheless there is a growing realization that variable rules concerning trade secrets impact investment decisions, structuring of multinational businesses, and hiring policies. There is increasing concern that ineffective trade secrets protection will deter certain kinds of foreign direct investment and place a brake on cross-border trade and commercial agreements. On the other hand, because trade secrets protection tends to militate against labour mobility, freedom to imitate, and open circulation of what needs to be known to compete, it sits at the eye of the competitive storm. Intellectual property rights (IPRs) are increasingly significant elements of economic policy: they are vital to developed countries in an age of global trade. Today's astounding new technologies, stemming from the digital and biotechnological revolutions are creating new problems. William Cornish focusses upon the major dilemmas that currently enmesh the subject: the omnipresent spread of IPRs across some recent technologies, the distraction caused by rights that achieve little of their intended purpose, and the seeming irrelevance of IPRs in the face of new technologies such as the internet. What IPRs are good for, and what they should achieve depends upon the law which defines them. There is great international, as well as national pressure for new laws, and in Europe, the EU is now the dominant force in shaping IP policy. Against this background, William Cornish surveys current arguments over legal policy in this field. How can the the issues raised by advances in human genetics be reconciled with the potential for diagnostic and therapeutic advances, and the patenting of molecules, genes, and even organisms by biotechnology and pharmaceutical companies? How can this new field be fairly protected through the existing requirements of patent law; and who should be responsible for effecting this result? Copyright is the traditional buttress of publishing, computer programming, and record and film production. It now faces a life-sapping threat from free and ready access to material via the Internet and other digital resources. How can a mixture of legal rights and technological barriers to access give reasonable protection to investment in new intellectual products without becoming an inordinate instrument of control? Trade marks are the crux of branding: a cornerstone of marketing that often eclipses even the very things being sold. How can we reconcile the tension between those intent on legal protection for every element of investment in branding, and those concerned to balance freedom to compete against the drive for 'fair trading'? This book gathers national and international reports from around the globe on key issues in the field of antitrust and intellectual property. Its first part discusses to what extent competition law should be concerned with differences in prices, terms and conditions, or quality that suppliers offer different purchasers. A detailed international report explores the major trends and challenges in this field and provides an excellent comparative study on this complex and challenging subject. In turn, the second part examines whether there should be legal restrictions on the ability of persons who claim, without sufficient justification, to hold IP rights that have been infringed on, to bring, or to threaten to bring, legal proceedings based on such claims against their competitors or others. In this regard, the book brings together the current legal responses across a number of European countries and elsewhere in the world, all summarised and elaborated on in an international report. The book also includes the resolutions passed by the General Assembly of the International League of Competition Law (LIDC) following debates on each of

these topics, which include proposed solutions and recommendations. The LIDC is a long-standing international association that focuses on the interface between competition law and intellectual property law, including unfair competition issues. The 2013 edition of this one-volume compilation of intellectual property statutes, regulations and treaties for law students and practitioners includes the provisions of the America Invents Act, which significantly altered major aspects of the patent laws, along with all other new enactments and amendments made during the past year. As its title suggests, this guide offers a broad summary of the law of intellectual property (i.e. patents, copyrights trademarks, trade secrets and a variety of other sui generis forms of protection for innovations and creativity) and the law of unfair competition (i.e. trademark infringement, passing off, trade disparagement, and deceptive advertising). It also touches on related fields of law (i.e. antitrust, consumer protection, regulated industries, and the law governing interference with contractual and noncontractual relations). This book brings famous cases to life by telling the true, never-heard-before stories behind landmark Intellectual Property cases. It is organized into six chapters, each drawing on cases in patents, copyrights, trademarks, or unfair competition, to illustrate the problems encountered in intellectual property law. The works, inventions, and marks at issue in these cases vary widely. This guide shows how to identify a company's protectable assets, initiate steps to protect those assets, and use them to generate additional income. Specific chapters cover selection, application, maintenance, and infringement for trademarks, copyright, and patents. Other topics include trade secrets, unfair competition, employee work products, internal processes, and the Internet. The book also contains model forms and documents, including trademark license agreements, application forms for trademarks, copyrights, and patents, sample noncomplete clauses, and intellectual asset audit forms. Bouchoux is an attorney specializing in intellectual property law. c. Book News Inc. Privilege to Compete; Obtaining Trademark Rights; Types of Trademarks; Shape, Color and Trade Dress; Trademark Infringement; Dilution; Permissible Uses of Another's Mark; Copyrightable Subject Matter; Publication; Copyright Formalities; Joint Works and Works Made for Hire; Rights of Copyright Owners; Copyright Infringement; Fair Use; Misappropriation Doctrine; Right of Publicity; Preemption of State Law; Types of Patents; Patent-Eligible Subject Matter; Novelty; Statutory Bar; Non-Obviousness; Utility; Patent Application Procedure; Patent Infringement; Trade Secret Law; State False Advertising and Disparagement Law; Lanham Act Claims for False Advertising and Disparagement; F.T.C. Unfairness Doctrine; F.T.C. Deception Doctrine; Advertising Substantiation; F.T.C. Remedies; F.T.C. Rule-making; Consumer Remedies; Price Discrimination Under the Robinson-Patman Act; Harm to Primary-Line Competition; Harm to Secondary-Line Competition; Cost Justification and Meeting Competition Defenses; Advertising Allowances; Buyer Liability for Price Discrimination. Understanding Intellectual Property Law, 2nd Edition covers all of the intellectual property areas and issues likely to be addressed in an intellectual property survey course. After a comprehensive Introduction in Chapter 1, the general areas covered in the remaining chapters include: • Patents • Trade Secrets • Copyright • Trademarks, and • Other Intellectual Property Rights such as: • Design Protection • Plant Protection • Semiconductor Chip Protection • False Advertising • Misappropriation • Rights of Publicity • Idea Submission This new edition also includes: • Coverage of major Supreme Court cases in intellectual property from the past decade • Changes made in response to the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS) • Synthesis and reorganization of materials on patentable subject matter • Developments in trade secret law, including adoption of the Uniform Trade Secrets Act (UTSA) • Synthesis and reorganization of materials on copyrightable subject matter • New material on secondary liability, including Grokster, Global-Tech, and the safe harbors and notice-and-takedown provisions for online service providers • Coverage of the Digital Millennium Copyright Act, including anti-circumvention and copyright management information • New materials on Internet technology, including streaming, search engines, keyword advertising, domain names, and cybersquatting • Completely revised coverage of trademarks, including the Federal Trademark Dilution Act and the Trademark Dilution Revision Act While Understanding Intellectual Property Law, 2nd Edition presents important updates to Patent Law since the first edition, unfortunately timing did not allow inclusion of provisions of the America Invents Act. A complimentary supplement (.pdf) addressing these provisions and the changes to Patent Law (covered in Chapter # 2) as a result of these provisions is now available. Professors can access this Supplement at: <http://www.lexisnexis.com/lawschool/class/publications>. Students will be able to access and download the Supplement (at no charge) at: <http://www.lexisnexis.com/lawschool/study/texts>. The supplement analyzes important statutory provisions and their effect on current patent law. Topics from the new Act will include: (1) the first inventor to file system and its effects on the definition of prior art; (2) the new derivation proceedings, replacing the current system of interferences, which allows a patent owner to challenge an earlier filed patent for derivation from the subsequent patent; (3) the prior commercial use defense; (4) the new procedures for inter partes review; (5) the new procedure for post-grant review; (6) the new rules for improper patent marking; (7) changes to the treatment of tax method patents; (8) the new rules pertaining to the best mode requirement; and (9) changes to the rules of jurisdiction. A comprehensive overview of intellectual property law, this handbook will be a vital read for all invested in the field of IP law. Topics include the foundations of IP law; its emergence and development in various jurisdictions; its rules and principles; and current issues arising from the existence and operation of IP law in a political economy. This book will be of interest for all jurists doing research and working practically in intellectual property law and international economic law. It should be an element of the base stock for every law school library and specialized law firm. This title is available as Open Access. The Arbitration of International Intellectual Property Disputes, which is designed not only for arbitration counsel and arbitrators but also for in-house counsel and transactional lawyers, provides a thorough guide to the use of arbitration to resolve these disputes. Both practical as well as scholarly, it starts by exploring how and why arbitration can provide the best way to resolve these disputes and how to draft an effective arbitration provision. It then covers the principal unique issues which can arise in the arbitration itself, from choosing the tribunal through confidentiality, discovery, validity determinations, choice of law, provisional and final remedies and enforceability. With the world more and more dependent upon technology of all types, the continued and growing importance of intellectual property cannot be understated. There has been, and will continue to be, an accompanying explosion in the number and complexity of transactions in which intellectual property is a critical, if not the critical, element. Many of these transactions cross national boundaries; as do the disputes which inevitably arise from them. But international intellectual property disputes present complexities not encountered in either intellectual property disputes which are confined to one country or other international commercial disputes. The Arbitration of International Intellectual Property Disputes will serve as a handy reference and guide for navigating through the complex maze of intellectual property and arbitration. This book not only offers in-depth analysis of federal environmental statutes having a bearing on land use, but also looks closely at rules imposed by state and local governments. The 2016 edition of this collection of primary source materials in

intellectual property law incorporates the latest legislation in the field, along with selected regulatory revisions, making it one of the most up-to-date resources for use in both survey and specialized courses on intellectual property. The new edition has also been enhanced to improve readability. This new edition also incorporates the provisions of the just enacted Defend Trade Secrets Act of 2016 along with recent amendments to the patent statute and to the customs regulations relating to parallel importation. Of course the volume retains all the basic IP statutes along with numerous useful additional materials such as provisions of the Restatement of Unfair Competition, and the text of numerous international agreements dealing with intellectual property law, including the relatively new Hague Agreement Concerning the International Registration of Industrial Designs and the Beijing Treaty on Audiovisual Performances. The availability of all these materials in a single comprehensive volume which can be annotated by students makes it possible to use classroom time more efficiently and will enhance student learning throughout the IP curriculum.
