Environmental Engineering Jul 24 2022 During the last two decades, the environmental pollution regulations have undergone a vast change. Attempts have been made to refine the conventional technologies and to develop new technologies to meet increasingly more stringent environmental quality criteria. The challenge that one faces today is to meet these stringent requirements in an environmentally acceptable and cost effective manner. The present book addresses the application of the state-of-the-art technology to the solutions to today's problems in industrial effluent pollution control and environmental protection. The highlight of this book is the inclusion of the salient features of process modifications and other important methods and techniques for the minimization of wastes. The chapter on process modification for waste minimization provides new

technical features and tools, latest technologies and techniques, and other industrial operations. Besides, the text covers the role of an environmental engineer in the methodology for making pollution control decisions. **KEY FEATURES :** Includes numerous self-explanatory tabular and diagrammatic representations. Presents pollution problems of few chemical and processing industries. Provides case studies on environmental pollution problems and their prevention. Analyzes thoroughly the planning and strategies of environmental protection. Designed as a textbook for the undergraduate students of civil and chemical engineering, this book will also be useful to the postgraduate students of environmental science and engineering.

Books by Horseback Aug 21 2019 "Capturing one librarian's breathtaking fictional journey is a riveting way to showcase and honor the risky work of these real librarians, and the text communicates a deep reverence for their mission-and their tremendous fortitude. Illustrations depict a pale, red-haired librarian, nearly always smiling despite the obstacles that nature puts in her path. Light and shadow are used effectively to convey Mother Earth's shifting moods... Educational and inspiring." -Kirkus Reviews Books By Horseback is a breathtaking adventure of a heroic Pack Horse Librarian who braves the harsh terrain of rural Kentucky to bring books to children who need them. Kentucky had fallen behind its neighboring states in electricity and highways, and the folks who lived in the craggy, mountainous region were struggling to survive. But courageous librarians were up to the challenge! Edith, a young Pack Horse Librarian, and her faithful horse Dan, adventure through rough terrain and a pending storm in order to deliver books to kids who desperately need them in this richly illustrated tale. Edith, like all Pack Horse Librarians, heroically risked their own safety to serve the most vulnerable members of their community. Librarians like Edith helped an entire generation learn to read and gain lifesaving knowledge in a critical time in history.

In Fact Sep 14 2021 This optimistic guide to Ireland at 100 tells our national story through facts and stats, placing Ireland under the microscope to chart 100 achievements of the past 100 years. Ireland remained one of the most poverty-stricken nations in Europe for decades after the State was formed. Yet now, it has the second-highest standard of living in the world. Author Mark Henry has gathered the data to tell an under-told story of our

national progress across every aspect of Irish life. He identifies the factors that account for Ireland's extraordinary success, as well as the five most prominent psychological biases that prevent us from recognising how far we have come. He also highlights the greatest challenges that we must now address if we are to continue to progress in the century ahead. While there is still more to be done, *In Fact* illustrates that Ireland, for all its imperfections, is in a much better state than you might think.

Minesweeper (Special Forces, Book 2) Dec 05 2020 "All the sizzle, chaos, noise and scariness of war is clay in the hands of ace storyteller Lynch." -- Kirkus Reviews for the World War II series Discover the secret missions behind America's greatest conflicts. Fergus Frew thought he knew what to expect when he signed up with the Navy's demolitions team. But as the Korean War rages on, Fergus and his fellow divers -- AKA "frogmen" -- are tasked with more than just scouting mudflats. Soon they're planting mines. And sabotaging tunnels, bridges... and even fishing nets. Strangest of all, it falls to Fergus to transport a spy into the country -- and that means traveling far from Navy-controlled waters. But frogmen are amphibious. And Fergus may not realize it, but he's in a position to change the way the whole world thinks about combat. National Book Award finalist Chris Lynch continues his explosive fiction series based on the real-life, top-secret history of US black ops and today's heroic Navy SEALs.

Management of Soil Problems Jul 12 2021 Soils are neither good nor bad, but some have inherent or acquired characteristics that may or may not suit our intended use. Unsuitable characteristics are considered to be soil problems, soil constraints or soil limitations. Only twelve percent of global land is right for agricultural production without much limitation. Some soils have severe limitations for crop production. These soils are so called 'problem soils'. Many of them do not have enough fertility to be productive; some are arid and saline; some are very sandy and dry; and some are wet and waterlogged for most of the growing season. The global demand for food, wood, fuel, fiber, medicine and other plant products for the 7.2 billion current world population has created such an immense pressure on global soil resources that even the most fertile soils are losing their productive capacity. We are being compelled to bring more and more unsuitable or marginally suitable soils under cultivation. Unless innovative and integrated soil, crop and environmental management practices are adopted for their improvement and sustainable use, further degradation is inevitable. This book, Management of Soil Problems, identifies the problems and discusses management options in a smooth and reader-friendly style. It will be useful for students and professionals of soil science, agriculture, forestry,

geography and environmental sciences.

Kingdom Overthrown Oct 03 2020 Seventeenth-century Europe was a theatre of almost endless rivalry and destruction, where wars of religion and dynastic succession caused devastation. Kingdom Overthrown: The Battle for Ireland, 1688-1691 is a fresh narrative account of the Williamite War, wherein Ireland became an unexpected stage in this European struggle. To the Irish officers who served in both armies, it was a fight for control of land, property, and influence. It was also part of a pan-European war that would have consequences across the continent; it saw the last ever confrontation on a battlefield between two claimants to the English throne, featuring many intense clashes including the siege of Derry and the battles of Aughrim and the Boyne. Providing the necessary historical context following Charles II's rise to power, the book then charts the central phase of the war, details the Williamite victory in Ireland, and outlines the social, political, and cultural consequences of the war. First-hand accounts of the soldiers and officers in both armies - collected from historical manuscript collections, copies of correspondence, and personal memoirs - give life and color to the narrative. Kingdom Overthrown is an accurate and human account of the most destructive conflict ever fought in Ireland. [Subject: History, Irish Studies, Military Studies]

Libertarian Anarchy Oct 27 2022 Political philosophy is dominated by a myth, the myth of the necessity of the state. The state is considered necessary for the provision of many things, but primarily for peace and security. In this provocative book, Gerard Casey argues that social order can be spontaneously generated, that such spontaneous order is the norm in human society and that deviations from the ordered norms can be dealt with without recourse to the coercive power of the state. Casey presents a novel perspective on political philosophy, arguing against the conventional political philosophy pieties and defending a specific political position, which he identifies as 'libertarian anarchy'. The book includes a history of the concept of anarchy, an examination of the possibility of anarchic societies and an articulation of the nature of law and order within such societies. Casey presents his specific form of anarchy, undergirded by a theory of human action that prioritises liberty, as a philosophically and politically viable alternative to the standard positions in political theory.

Radiation and Water in the Climate System Apr 09 2021 The study of the earth's climate requires reliable global data sets to validate numerical simulation models and to identify regional and global fluctuations and trends. This book presents ways to obtain such data from space-borne and ground-based measurements, both passive and active, over the entire electromagnetic spectrum. It describes the basics of such methods together with the most recent advancements and spans the field from clouds and the planetary radiation budget to surface processes and ocean properties. Each subject is backed by extensive reference lists to enable readers to probe more deeply.

Ecological Climatology Oct 15 2021 This book introduces an interdisciplinary framework to understand the interaction between terrestrial ecosystems and climate change. It reviews basic meteorological, hydrological and ecological concepts to examine the physical, chemical and biological processes by which terrestrial ecosystems affect and are affected by climate. The textbook is written for advanced undergraduate and graduate students studying ecology, environmental science, atmospheric science and geography. The central argument is that terrestrial ecosystems become important determinants of climate through their cycling of energy, water, chemical elements and trace gases. This coupling between climate and vegetation is explored at spatial scales from plant cells to global vegetation geography and at timescales of near instantaneous to millennia. The text also considers how human alterations to land become important for climate change. This restructured edition, with updated science and references, chapter summaries and review questions, and over 400 illustrations, including many in colour, serves as an essential student guide.

Wasted Years, Wasted Lives Volume 1 Aug 25 2022 Over the past several years, Ken Wharton, himself a former soldier, has been prolific in his coverage of the Troubles, which spread their tentacles far from the streets, and fields of Northern Ireland. Over 4,000 people died in or as a consequence of them and it cost the lives of over 1,300 British soldiers - a

fact which is unacknowledged by the MOD - and the lives of over 300 policemen and women. This is Ken's sixth book about the period and he draws on meticulous and detailed research, first-hand testimony of the soldiers who trod the same streets as himself, and an almost encyclopedic knowledge of the near 30-year period of murder, violence and civil war. The first-hand accounts help us to understand and examine the fears of the young soldiers who patrolled the dangerous streets of the Ardoyne and New Lodge, of Andersonstown, Turf Lodge and Ballymurphy and of the Creggan in Londonderry and the Derrybeg in Newry. He looks at the Loyalist paramilitaries and treats their sectarianism and mindless murder with the same contempt with which he treats the Republicans. He does not mince words about the Irish-Americans and their political stooges in the US Government, judicial system and the ordinary '7th generation Irishmen of the American East Coast.' This is a book not just for soldiers, but for anyone who wishes to look back and try to understand the madness inflicted upon several generations of innocent Irish and British people. In years to come, historians - both social and military - will reflect on this period of insanity with a greater knowledge than hitherto. If you wish to know how it felt to be an innocent sectarian victim, or an off-duty soldier or policeman or a young lad from Leeds, Liverpool or London hard targeting through the Lower Falls, then this book is a must read.

The Masterpiece Feb 25 2020 In this captivating novel, New York Times bestselling author Fiona Davis takes readers into the glamorous lost art school within Grand Central Terminal, where two very different women, fifty years apart, strive to make their mark on a world set against them. For most New Yorkers, Grand Central Terminal is a crown jewel, a masterpiece of design. But for Clara Darden and Virginia Clay, it represents something quite different. For Clara, the terminal is the stepping stone to her future. It is 1928, and Clara is teaching at the lauded Grand Central School of Art. Though not even the prestige of the school can override the public's disdain for a "woman artist," fiery Clara is single-minded in her quest to achieve every creative success—even while juggling the affections of two very different men. But she and her bohemian friends have no idea that they'll soon be blindsided by the looming Great Depression...and that even

poverty and hunger will do little to prepare Clara for the greater tragedy yet to come. By 1974, the terminal has declined almost as sharply as Virginia Clay's life. Dilapidated and dangerous, Grand Central is at the center of a fierce lawsuit: Is the once-grand building a landmark to be preserved, or a cancer to be demolished? For Virginia, it is simply her last resort. Recently divorced, she has just accepted a job in the information booth in order to support herself and her college-age daughter, Ruby. But when Virginia stumbles upon an abandoned art school within the terminal and discovers a striking watercolor, her eyes are opened to the elegance beneath the decay. She embarks on a quest to find the artist of the unsigned masterpiece—an impassioned chase that draws Virginia not only into the battle to save Grand Central but deep into the mystery of Clara Darden, the famed 1920s illustrator who disappeared from history in 1931.

Irish Elections 1948-77: Results and Analysis Jan 18 2022 This book is the second in the series Sources for the Study of Irish Politics, which is produced by the Political Studies Association of Ireland (PSAI). The aim of the PSAI is to promote the professional study of politics in and of Ireland, and the aim of the series is to make more widely available material that is at present difficult to obtain. Building on its predecessor Irish Elections 1922-44: Results and Analysis (1993), this volume assembles the full results of all elections to D á il É ireann from 1948 to 1977. The book also contains analysis of each election, summaries of votes, percentages and seats for each election, lists of TDs (members of parliament) elected at each election, information on defeated TDs and women TDs, analysis of transfer patterns, members of government appointed after each election, and the full results of all by-elections held in the period. It also provides summary results of the nine general elections of the period 1981-2007, along with a comprehensive list of TDs 1922-2008. Elections to D á il É ireann are held under the PR-STV (single transferable vote) electoral system, and this volume provides a fascinating account of PR-STV in operation as well as constituting an indispensable record of Irish political history over the

middle years of the independent state.

Making the Medieval Relevant Jun 11 2021 When scholars discuss the medieval past, the temptation is to become immersed there, to deepen our appreciation of the nuances of the medieval sources through debate about their meaning. But the past informs the present in a myriad of ways and medievalists can, and should, use their research to address the concerns and interests of contemporary society. This volume presents a number of

carefully commissioned essays that demonstrate the fertility and originality of recent work in Medieval Studies. Above all, they have been selected for relevance. Most contributors are in the earlier stages of their careers and their approaches clearly reflect how interdisciplinary methodologies applied to Medieval Studies have potential repercussions and value far beyond the boundaries of the Middle Ages. These chapters are powerful demonstrations of the value of medieval research to our own times, both in terms of providing answers to some of the specific questions facing humanity today and in terms of much broader considerations. Taken together, the research presented here also provides readers with confidence in the fact that Medieval Studies cannot be neglected without a great loss to the understanding of what it means to be human.

Considerations on Representative Government Nov 23 2019 "Those who have done me the honor of reading my previous writings will probably receive no strong impression of novelty from the present volume; for the principles are those to which I have been working up during the greater part of my life, and most of the practical suggestions have been anticipated by others or by myself. There is novelty, however, in the fact of bringing them together, and exhibiting them in their connection, and also, I believe, in much that is brought forward in their support. Several of the opinions, at all events, if not new, are for the present as little likely to meet with general acceptance as if they were. It seems to me, however, from various indications, and from none more than the recent debates on Reform of Parliament, that both Conservatives and Liberals (if I may continue to call them what they still call themselves) have lost confidence in the political creeds which they nominally profess, while neither side appears to have made any progress in providing itself with a better. Yet such a better doctrine must be possible; not a mere compromise, by splitting the difference between the two, but something wider than either, which, in virtue of its superior comprehensiveness, might be adopted by either Liberal or

Conservative without renouncing any thing which he really feels to be valuable in his own creed. When so many feel obscurely the want of such a doctrine, and so few even flatter themselves that they have attained it, any one may, without presumption, offer what his own thoughts, and the best that he knows of those of others, are able to contribute toward its formation"--Preface. The Case for Marriage Mar 28 2020 A groundbreaking look at marriage, one of the most basic and universal of all human institutions, which reveals the emotional, physical, economic, and sexual benefits that marriage brings to individuals and society as a whole. The Case for Marriage is a critically important intervention in the national debate about the future of family. Based on the authoritative research of family sociologist Linda J. Waite, journalist Maggie Gallagher, and a number of other scholars, this book's findings dramatically contradict the anti-marriage myths that have become the common sense of most Americans. Today a broad consensus holds that marriage is a bad deal for women, that divorce is better for children when parents are unhappy, and that marriage is essentially a private choice, not a public institution. Waite and Gallagher flatly contradict these assumptions, arguing instead that by a broad range of indices, marriage is actually better for you than being single or divorced— physically, materially, and spiritually. They contend that married people live longer, have better health, earn more money, accumulate more wealth, feel more fulfillment in their lives, enjoy more satisfying sexual relationships, and have happier and more successful children than those who remain single, cohabit, or get divorced. The Case for Marriage combines clearheaded analysis, penetrating cultural criticism, and practical advice for strengthening the institution of marriage, and provides clear, essential guidelines for reestablishing marriage as the foundation for a healthy and happy society. "A compelling defense of a sacred union. The Case for Marriage is well written and well argued, empirically rigorous and learned, practical and commonsensical." -- William J. Bennett, author of The Book of Virtues "Makes the absolutely critical point that marriage has been misrepresented and misunderstood." -- The Wall Street Journal www.broadwaybooks.com

Environmental Engineering and Safety Dec 17 2021 Future scientists, engineers, public health workers face challenges which were predicted, but

certainly not expected to emerge this soon and to the magnitude presently occurring. The problems and projected solutions in this book cover a broad spectrum of issues including industrial and domestic solid wastes, air pollution and associated global warming, noise pollution and safety. Many engineering elements go into developing solutions to these problems including the need for additional detailed mapping and surveying, developing improved waste water treatment, including the development of more eco-friendly process and importance on conservation. Issues such as environmental assessments now play a most important role in practically all proposed developments. Old landfills are being mined for fuel, new landfills are designed to prevent waste materials from migrating to groundwater and new approaches to waste incineration focus on energy recovery and conversion of waste materials into usable materials. This text should help engineers and scientists meet the environmental challenges.

Leaders in Educational Research Feb 07 2021 In this volume fourteen fellows of the International Academy of Education, whose research work is known internationally, reflect upon the ways in which their careers have been shaped by early family influences, by random events and surprise opportunities, and by nascent intellectual interests and academic mentoring. The authors come from many different countries (Australia, Belgium, Cyprus, Germany, Greece, Israel, Mexico, South Africa, and the USA), and from a number of disciplinary or intellectual orientations including curriculum development, economics, educational measurement and statistical analysis, history, philosophy, policy analysis, program evaluation, psychology, and sociology. They come from diverse social and cultural backgrounds; and in many cases rose above the travails presented by wars, social unrest, and social injustice to attain an education that launched them eventually into a research career. On this path, many were unexpectedly assisted by established researchers who served as mentors or “enablers.” Their personal stories, then, are of broad interest – and may even be a source of comfort and inspiration to younger colleagues who are commencing their careers in the international educational research community.

Language, Culture and Identity in Applied Linguistics Sep 26 2022 Language, Culture and Identity is a collection of papers from the BAAL Annual Conference at the University of Bristol 2005. The thirteen papers, by researchers from Britain and across Europe, represent a range of research orientations within Applied Linguistics which connect in different ways with

issues in culture and identity. Two plenary addresses from the conference, by Roz Ivani and Srikant Sarangi, explore the themes of identity and culture in contexts of learning and of work. Papers addressing language planning and policy issues present recent analyses of francophone identity in Canada and Sami identity in Finland. The issues of culture and identity in writing are explored in different papers from the perspective of identity construction in academic writing, discipline cultures in higher education contexts, the consequences of these for interdisciplinary writers, and how writers construct audience identity through the linguistic choices they make. Empirical studies of language learning and teaching are also represented, with papers on Processing Instruction and Intercultural Pragmatics. The themes of identity and culture in these papers connect a range of sub-disciplines within Applied Linguistics, and also connect knowledge building in Applied Linguistics with pervasive themes in research across the social sciences, into the ways people as individuals and in communities understand, shape and represent their experiences of learning and work.
