This guide offers the counsel of a trusted coach while addressing systemic and sustainable improvement processes for boosting student performance and turning around struggling schools! Explanation of the success and failure of the Roman economy is one of the most important problems in economic history. As an economic system capable of sustaining high production and consumption levels, it was unparalleled until the early modern period. This volume focuses on how the institutional structure of the Roman Empire affected economic performance both positively and negatively. An international range of contributors offers a variety of approaches that together enhance our understanding of how different ownership rights and various modes of organization and exploitation facilitated or prevented the use of land and natural resources in the production process. Relying on a large array of resources - literary, legal, epigraphic, papyrological, numismatic, and archaeological - chapters address key questions regarding the foundations of the Roman Empire's economic system. Questions of growth, concentration and legal status of property (private, public, or imperial), the role of the state, content and limitations of rights of ownership, water rights and management, exploitation of indigenous populations, and many more receive new and

original analyses that make this book a significant step forward to understanding what made the economic achievements of the Roman empire possible. Leading experts in psychiatry, philosophy, and psychology integrate the scientific lenses relevant to understanding psychiatric disorders. The world is at a pivotal crossroad in energy choices. There is a strong sense that our use of energy must be more sustainable. Moreover, many also broadly agree that a way must be found to rely increasingly on lower carbon energy sources. However, no single or clear solution exists on the means to carry out such a shift at either a national or international level. Traditional energy planning (when done) has revolved around limited cost projections that often fail to take longer term evidence and interactions of a wider set of factors into account. The good news is that evidence does exist on such change in case studies of different nations shifting toward low-carbon energy approaches. In fact, such shifts can occur quite quickly at times, alongside industrial and societal advance, innovation, and policy learning. These types of insights will be important for informing energy debates and decision-making going forward. *Low Carbon Energy Transitions: Turning Points in National Policy and Innovation* takes an in-depth look at four energy transitions that have occurred since the global oil crisis of 1973: Brazilian biofuels, Danish wind power, French nuclear power, and Icelandic geothermal energy. With these cases, Dr. Araújo argues that significant nationwide shifts to low-carbon energy can occur in under fifteen years, and that technological complexity is not necessarily a major impediment to such shifts. Dr. Araújo draws on more than five years of research, and interviews with over 120 different scientists, government workers, academics, and members of civil society in completing this study. *Low Carbon Energy Transitions* is written for professionals in energy, the environment and policy as well as for students and citizens who are interested in critical decisions about energy sustainability. Technology briefings are provided for each of the major technologies in this book, so that scientific and non-scientific readers can engage in more even discussions about the choices that are involved. *Entrepreneurial Finance: Venture Capital, Deal Structure & Valuation, Second Edition* illustrates how the theory and methods of finance and economics can be used to guide strategic decision-making. This text prepares readers for a variety of situations that confront stakeholders in the rapidly evolving fields of entrepreneurial finance and venture capital, outlining ways to think from the investor's and entrepreneur's perspectives. Readers will find a unique and direct focus on value creation as the objective of each strategic and financial choice. The authors specifically address the influences of risk and uncertainty on new venture success and investment performance, devoting substantial attention to methods of financial modeling and contract design. Finally, they

provide a comprehensive survey of approaches to new venture valuation, with an emphasis on applications. The second edition is thoroughly revised to reflect new data, research, and changes in practice in this fast-moving field. It has an increased focus on venture capital, while maintaining its hallmark coverage of the financial aspects of entrepreneurship. Updates throughout address technological changes that have the potential to dramatically change the landscape for finance, such as recent innovations in contracting for early-stage ventures, artificial intelligence and machine learning, and Internet connectivity. Lastly, the book offers a companion website with a useful suite of resources for students and instructors alike, including spreadsheets, templates, simulation applications, and interactive cases and tutorials. The notion of 'substance' is proving to be central to the OECD's base erosion and profit shifting (BEPS) project, particularly in the area of taxation of intangibles. In this book, this notoriously hard-to-define concept is examined from three distinct angles: transfer pricing (DEMPE Approach), harmful tax practices (Substantial Activity Requirement), and tax treaties (Beneficial Ownership). In a thoroughgoing investigation using the practical example of an IP company, the author provides detailed and precise answers to the following questions: What substance is necessary to be entitled to intangible-related returns? What substance is necessary to benefit from preferential IP regimes or no or only nominal tax jurisdictions? What substance is necessary to collect royalties free from withholding taxes? Given the need to agree on a common understanding of substance in international tax law in order to avoid costly tax disputes, this important book is unmatched for the clear light it sheds on the most relevant substance requirements regarding intangibles. It will prove invaluable to tax practitioners and in-house counsel who are dealing with cross-border transactions concerning intangibles. Each topic begins with scope notes about subjects included and subjects excluded and covered by other topics. Also, there is an outline of the topic, which includes a list of all Key Numbers in that topic. Headnotes are collected by jurisdiction or court and filed according to the West Key Number System®. The emerging and continuing challenge of cities and urbanization has become a forefront

in current global concerns. Professors George Pomeroy's and Gerald Webster's book, *Global Perspectives on Urbanization*, addresses an expanse of challenges related to poverty and the environment. From Mexico City to Eastern Europe and from the slum dwellers to gentrification, this book offers a global perspective. Drawing from research in both developed and developing world contexts, each chapter provides the reader with viewpoints from recognized global leaders in the field. Empirically well-founded, this study appeals to urbanists and planners, geographers and sociologists, as well as those generally interested in urban studies. Analyzing historical perspectives, the roles of universities and research, globalization, and poverty (among many others), this comprehensive book provides a thoroughly researched wealth of information. In the world of law enforcement art and antiquity crime has in the past usually assumed a place of low interest and priority. That situation has now slowly begun to change on both the local and international level as criminals, encouraged in part by the record sums now being paid for art treasures, are now seeking to exploit the art market more systematically by means of theft, fraud and looting. In this collection academics and practitioners from Australasia, Europe and North America combine to examine the challenges presented to the criminal justice system by these developments. Best practice methods of detecting, investigating, prosecuting and preventing such crimes are explored. This book will be of interest and use to academics and practitioners alike in the areas of law, crime and justice. This book is about a new approach to design, construction, and facility management called building information modeling. It provides an in-dept understanding of BIM technologies, the business and organizational issues associated with its implementation, and the profound impacts that effective use of BIM can provide to all members of a project team. This Handbook provides a cutting edge study of the fast developing field of international law on the protection of cultural heritage by taking stock of the recent developments and of the core concepts and current challenges. The legal protection of cultural heritage has come under renewed focus from the international community and states since the 1990s. This is evidenced by the adoption of a range of international instruments. Countries are also enacting cultural heritage legislation or overhauling existing laws within their own national territory. Contributions address the protection of immovable and movable, tangible and intangible cultural heritage in peacetime and in the event of armed conflict as well as the interaction between specific regimes of cultural heritage protection with other fields of international law, including international criminal law, human rights and humanitarian law, environmental law, international trade, investments, and intellectual property. The last part of the Handbook covers diverse regional systems of heritage protection. An argument for retaining the notion of personal property in the products we "buy" in the digital marketplace. If you buy a book at the bookstore, you own it. You can take it home, scribble in the margins, put in on the shelf, lend it to a friend, sell it at a

garage sale. But is the same thing true for the ebooks or other digital goods you buy? Retailers and copyright holders argue that you don't own those purchases, you merely license them. That means your ebook vendor can delete the book from your device without warning or explanation—as Amazon deleted Orwell's 1984 from the Kindles of surprised readers several years ago. These readers thought they owned their copies of 1984. Until, it turned out, they didn't. In *The End of Ownership*, Aaron Perzanowski and Jason Schultz explore how notions of ownership have shifted in the digital marketplace, and make an argument for the benefits of personal property. Of course, ebooks, cloud storage, streaming, and other digital goods offer users convenience and flexibility. But, Perzanowski and Schultz warn, consumers should be aware of the tradeoffs involving user constraints, permanence, and privacy. The rights of private property are clear, but few people manage to read their end user agreements. Perzanowski and Schultz argue that introducing aspects of private property and ownership into the digital marketplace would offer both legal and economic benefits. But, most important, it would affirm our sense of self-direction and autonomy. If we own our purchases, we are free to make whatever lawful use of them we please. Technology need not constrain our freedom; it can also empower us. Enterprise Artificial Intelligence Transformation AI is everywhere. Received document entitled: APPENDIX IN SUPPORT OF PETITION FOR WRIT This book provides empirical evidence from Kenya, Tanzania and Mozambique and from different production systems of the

importance of livestock as an asset to women and their participation in livestock and livestock product markets. It explores the issues of intra-household income management and economic benefits of livestock markets to women, focusing on how types of markets, the types of products and women's participation in markets influence their access to livestock income. The book further analyses the role of livestock ownership, especially women's ownership of livestock, in influencing household food security though increasing household dietary diversity and food adequacy. Additional issues addressed include access to resources, information and financial services to enable women more effectively to participate in livestock production and marketing, and some of the factors that influence this access. Practical strategies for increasing women's market participation and access to information and services are discussed. The book ends with recommendations on how to mainstream gender in livestock research and development if livestock are to serve as a pathway out of poverty for the poor and especially for women.

The Offshore Pipeline Construction Industry: Activity Modeling and Cost Estimation in the United States Gulf of Mexico presents the latest technical concepts and economic calculations, helping engineers make better business decisions. The book covers flow assurance, development strategies on pipeline requirements and the construction service side with a global perspective. In addition, it focuses on one of the most underdeveloped, promising assets - the Gulf of Mexico. Pipeline construction and decommissioning estimation methods are examined with reliable data presented. A final section covers trends for oil, gas, bulk oil, bulk gas, service and umbilical pipelines for installation and decommissioning using correlation models. This book delivers a much-needed tool for the pipeline engineer to better understand the economical choices and alternatives to designing, constructing, and operating today's offshore pipelines. Built with construction and decommissioning decision tools supported by reliable data and case studies Organized by parts, including a section devoted to Gulf of Mexico statistics and estimation methods Helps readers gain practical knowledge on strategies and cost models from a global pipeline perspective, including environmental and mitigation considerations Building upon his earlier book that detailed agile data warehousing programming techniques for the Scrum master, Ralph's latest work illustrates the agile interpretations of the remaining software engineering disciplines: Requirements management benefits from streamlined templates that not only define projects quickly, but ensure nothing essential is overlooked. Data engineering receives two new "hyper modeling" techniques, yielding data warehouses that can be easily adapted when requirements change without having to invest in ruinously expensive data-conversion programs. Quality assurance advances with not only a stereoscopic top-down and bottom-up planning method, but also the incorporation of the latest in automated test engines. Use this step-by-step guide to deepen your own application development skills through self-study, show your teammates the world's fastest

and most reliable techniques for creating business intelligence systems, or ensure that the IT department working for you is building your next decision support system the right way. Learn how to quickly define scope and architecture before programming starts Includes techniques of process and data engineering that enable iterative and incremental delivery Demonstrates how to plan and execute quality assurance plans and includes a guide to continuous integration and automated regression testing Presents program management strategies for coordinating multiple agile data mart projects so that over time an enterprise data warehouse emerges Use the provided 120-day road map to establish a robust, agile data warehousing program This book contains a digest of every point in every reported decision of the American courts, both national and state, from the earliest times (1658) to the present day [1916], relating to claims arising between shippers and carriers of goods and livestock by rail or water. Cases decided in the United States district courts, United States Court of International Trade, and rulings of the Judicial Panel on Multidistrict Litigation. The issue of collective and multiple property rights in animals, such as cattle, camels or reindeers, among pastoralists has never been a subject of special cross-cultural and comparative study.

Focusing on pastoralist societies in East and West Africa, the Far North and Siberia, and the Eurasian steppes, this volume addresses the issue of property rights and the changes these societies have undergone due to the direct or indirect influence of modernization and globalization processes. The contributors also investigate the interplay of older sets of rights and modern marketing policies; political, ecological and economic effects of collectivization and de-collectivization; the existence of collective and private property in the Soviet Union and its successor states; state taxation and destocking measures in African dry lands; and the effects of quarantine, as well as import and export regulations. The rich and well-researched ethnographic, historical, and economic data in these chapters provides new theoretical insights into the matter of property rights in animals. Principal collections with their catalogues and an exhaustive bibliography complete this valuable reference work.
