[Multiple Sclerosis](#) Nov 27 2022 Affecting an estimated 2.5 million people worldwide, multiple sclerosis (MS) is the most common neurological cause of debilitation in young adults. Incurable, and with the precise causes still unknown, both diagnosis and management of the condition is complicated. This book summarizes the latest understanding of the causes of the disease, using accessible, bullet-point text to describe key clinical features and diagnostic criteria. Disease-modifying therapies and management of symptoms, including fatigue, tremor and cognitive changes, are covered in detail. With a chapter focusing solely on presentations in the emergency room, the importance of recognizing these neurological emergencies is emphasised, along with indications for admission in MS patients. The impact of MS on women's reproductive health and the increasing recognition of MS in pediatric patients is also explored. An up-to-date and practical approach to the accurate diagnosis and management of MS, this is an invaluable resource for both hospital and outpatient settings.

[Multitasking: Executive Functioning in Dual-Task and Task Switching Situations](#) Jan 17 2022 Multitasking refers to performance of multiple tasks. The most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks (i.e., dual tasking) or executing multiple tasks in varying sequences (i.e., task switching). In the literature, numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and/or sequentially active component of task-sets in these situations. However, these approaches have been rather vague regarding explanatory concepts (e.g., task-set inhibition, preparation, shielding, capacity limitation), widely lacking theories on detailed mechanisms and/ or empirical evidence for specific subcomponents. The present research topic aims at providing a selection of contributions on the details of executive functioning in dual-task and task switching situations. The contributions specify these executive functions by focusing on (1) fractionating assumed mechanisms into constituent subcomponents, (2) their variations by age or in clinical subpopulations, and/ or (3) their plasticity as a response to practice and training.

Essentials of Cross-Battery Assessment Jul 11 2021 The most up-to-date resource of comprehensive information for conducting cross-battery assessments The Cross-Battery assessment approach—also referred to as the XBA approach—is a time-efficient assessment method grounded solidly in contemporary theory and research. The XBA approach systematically integrates data across cognitive, achievement, and neuropsychological

batteries, enabling practitioners to expand their traditional assessments to more comprehensively address referral concerns. This approach also includes guidelines for identification of specific learning disabilities and assessment of cognitive strengths and weaknesses in individuals from culturally and linguistically diverse backgrounds. Like all the volumes in the Essentials of Psychological Assessment series, Essentials of Cross-Battery Assessment, Third Edition is designed to help busy practitioners quickly acquire the knowledge and skills they need to make optimal use of psychological assessment instruments. Each concise chapter features numerous callout boxes highlighting key concepts, bulleted points, and extensive illustrative material, as well as test questions that help you to gauge and reinforce your grasp of the information covered. Essentials of Cross-Battery Assessment, Third Edition is updated to include the latest editions of cognitive ability test batteries, such as the WISC-IV, WAIS-IV, and WJ III COG, and special purpose cognitive tests including the WMS-IV and TOMAL-II. This book now also covers many neuropsychological batteries such as the NEPSY-II and D-KEFS and provides extensive coverage of achievement batteries and special purpose tests, including the WIAT-III, KM-3, WRMT-3 and TOWL-4. In all, this book includes over 100 psychological batteries and 750 subtests, all of which are classified according to CHC (and many according to neuropsychological theory. This useful guide includes a timesaving CD-ROM, Essential Tools for Cross-Battery Assessment (XBA) Applications and Interpretation, which allows users to enter data and review results and interpretive statements that may be included in psychological reports. Note: CD-ROM/DVD and other supplementary materials are not included as part of eBook file.
