This book explores the issue of private sector over-indebtedness following the recent financial crisis. It addresses the various challenges for policymakers, investors and economic agents affected by applied remedial policies as the private non-financial sector in Europe continues to face increased challenges in servicing its debt, with the problem mainly concentrated in several countries in the EU periphery and Eastern Europe. Chapters from expert contributors address reduced investment as firms concentrate on deleveraging and repairing their balance sheets, curtailed consumer spending, depressed collateral values and weak credit creation. They examine effective policies to facilitate private sector debt restructuring which may involve significant upfront costs in terms of time to implement and committed budgetary resources, as well as necessary reforms required to improve the broader institutional framework and judicial capacity. The book also explores the issue of over indebtedness in the household sector, contributing to the literature in establishing best practice principles for household debt. Self-organising networks have become the dominant innovators of complex technologies and radical innovation. The growing need for co-operation to ensure innovation success calls for a broader understanding of what makes innovation projects successful and requires new concepts. The book introduces the new concept of “innovation communities”, defining them as informal networks of like-minded individuals who act as innovation promotors or champions. These key figures come from various companies and organisations and will team up in a project-related fashion, jointly promoting a certain innovation, product or idea either on one or across different levels of an innovation system. The publication presents findings from surveys that demonstrate that networks of champions are a success factor in radical innovation.

Five case studies of noteworthy innovation projects illustrate why the collaboration of champions can make innovation projects more successful. Furthermore, the book presents hands-on methods and includes best-practice cases and guidelines on how to develop innovation communities. This publication comprises empirical findings and practical experiences that are valuable for the following groups in particular: Entrepreneurs; Innovation, R&D, and network managers; Innovation and strategy consultants; Innovation and start-up intermediaries; Innovation researchers; Government officials and politicians responsible for R&D and innovation programmes and funding This book provides the technical essentials, state-of-the-art knowledge, business ecosystem and standards of Near Field Communication (NFC) by NFC Lab - Istanbul research centre which conducts intense research on NFC technology. In this book, the authors present the contemporary research on all aspects of NFC, addressing related security aspects as well as information on various business models. In addition, the book provides comprehensive information a designer needs to design an NFC project, an analyzer needs to analyze requirements of a new NFC based system, and a programmer needs to implement an application. Furthermore, the authors introduce the technical and administrative issues related to NFC technology, standards, and global stakeholders. It also offers comprehensive information as well as use case studies for each NFC operating mode to give the usage idea behind each operating mode thoroughly. Examples of NFC application development are provided using Java technology, and security considerations are discussed in detail. Key Features: Offers a complete understanding of the NFC technology, including standards, technical essentials, operating modes, application development with Java, security and privacy, business ecosystem analysis Provides analysis, design as well as development guidance for professionals from administrative and technical perspectives Discusses methods, techniques and modelling support including UML are demonstrated with real cases Contains case studies such as payment, ticketing, social networking and remote shopping This book will be an invaluable guide for business and ecosystem analysts, project managers, mobile commerce consultants, system and application developers, mobile developers and practitioners. It will also be of interest to researchers, software engineers, computer scientists, information technology specialists including students and graduates. From an internationally acclaimed economist, a provocative call to jump-start economic growth by aggressively overhauling liberal democracy Around the world, people who are angry at stagnant wages and growing inequality have rebelled against established governments and turned to political extremes. Liberal democracy, history's greatest engine of growth, now struggles to overcome unprecedented economic headwinds—from aging populations to scarce resources to unsustainable debt burdens. Hobbled by short-term thinking and ideological dogma, democracies risk falling prey to nationalism and protectionism that will deliver declining living standards. In *Edge of Chaos*, Dambisa Moyo shows why economic growth is essential to global stability, and why liberal democracies are failing to produce it today. Rather than turning away from democracy, she argues, we must fundamentally reform it. *Edge of Chaos* presents a radical blueprint for change in order to galvanize growth and ensure the survival of democracy in the twenty-first century. *Pro WCF 4.0: Practical Microsoft SOA Implementation* is a complete guide to Windows Communication Foundation from the service-oriented architecture (SOA) perspective, showing you why WCF is important to service-oriented architecture and development. This book provides deep insight into the functionality of WCF, which shipped with .NET 4.0-like service discovery, routing service, simplified configuration, and other advanced features. Included in this title are informative examples that will aid the reader in understanding and implementing these important additions. This book also covers the unified programming model, reliable messaging, security, and the peer-to-peer programming model. You'll also learn how to move your current .NET remoting and web service applications to WCF, and how to integrate those applications with WCF 4. This book offers genuine insight into solving real enterprise problems using WCF and .NET 4.0. First published in 2011 *The Precariat* is the hugely influential first account of an emerging class of people facing insecurity, moving in and out of precarious work that gives little meaning to their lives. Standing warns that the growth of the precariat is producing instabilities in society. Its internal divisions have led to the villainization of migrants and other vulnerable groups and some are susceptible to the dangers of political extremism. Standing argues for a new politics which puts the fears and aspirations of the precariat at the heart of a progressive strategy of redistribution and income security. The precariat is an increasingly global phenomenon, highly visible in the ongoing migrant crisis and protest movements around the world. In a new preface for the *Revelations* edition Guy Standing discusses recent political developments and their effect on the precariat. *Jane's Fighting Ships* is your essential reference to the world's navies. Country by country, you will find authoritative commentaries for each ship, complete with comprehensive details of: displacement and dimensions, main machinery, speed and range, weapons systems, construction and modernisation programmes, latest operational status and strength of fleet including sales to other navies. Elana Shohamy is a professor and chair of the language education program at the School of Education, Tel Aviv University, where she teaches, researches and writes about multiple issues relating to multilingualism: language policy, language testing and language in the public space. -- This report is about the twelve countries of the former Soviet Union (Eurasia). About 85 percent of the region's economic output is in six resource-rich economies. Today, 85 percent of Eurasia's 280 million people are no longer poor. But academics who study resource-based economies debate whether these countries are cursed or blessed. And Eurasia's policymakers long for the day when their economies are less extractive and more innovative. These observations prompt questions: Are resources a blessing or a curse? If it is one of these things, what would make it into the other? How much should Eurasia try to diversify their exports and economies away from natural resources? Are there ways to make Eurasian economies both extractive and innovative? The answers: a large majority of Eurasia's people should consider themselves blessed. To make sure that this blessing does not become a curse, Eurasian economies have to become efficient—more productive, job-creating, and stable. But efficiency is not the same as diversification: there is little evidence that more concentrated economies have slower productivity growth, fewer jobs, or much more economic volatility. Governments need to worry less about the composition of exports and production and more about asset portfolios—natural resources, built capital, and economic institutions. They have much to do. Eurasia's portfolios are heavy in tangibles like oil and gas and roads and railways and light in intangibles such as the institutions for managing resource earnings, providing social services, and regulating enterprise. But tangibles are not what distinguish success from failure—investments in intangibles, early in their development, have made some resource-rich countries both extractive and innovative. The wisdom and insight contained in this book can help make the library a center for positive aging. *The Second European Edition of Services Marketing: Integrating Customer Focus Across the Firm* by Wilson, Zeithaml, Bitner and Gremler uniquely focuses on the development of customer relationships through quality service. Reflecting the increasing importance of the service economy, *Services Marketing* is the only text that put the customer's experience of services at the centre of its approach. The core theories, concepts and frameworks are retained, and specifically the gaps model, a popular feature of the book. The text moves from the foundations of services marketing before introducing the gaps model and demonstrating its application to services marketing. In the second edition, the book takes on more European and International contexts to reflect the needs of courses, lecturers and students. The second edition builds on the wealth of European and International examples, cases, and research in the first edition, offering more integration of European content. It has also be fully updated with the latest research to ensure that it continues to be seen as the text covering the very latest services marketing thinking. In addition, the cases section has been thoroughly examined and revised to offer a range of new case studies with a European and global focus. The online resources have also been fully revised and updated providing an excellent package of support for lecturers and students. The authority on rail systems around the globe. Track the latest developments in railway systems and equipment manufacturers across the globe with this authoritative industry survey. With the return of vets who have served in Iraq and Afghanistan and with a much larger number of vets from earlier eras who are turning to the VA for at least a portion of their health care, the VHA is now treating more than 5 million vets each year. Many have suggested that the quality of care in the vets' health system has been bolstered by concerted efforts to track performance measures, expand the use of health info. technology (HIT), manage chronic diseases, coordinate care by different providers, and enhance the provision of evidence-based med. practices. This report provides an assessment of quality improvement, cost and utilization of services, and health info. technology in the VHA. It examines VHA's experience with quality improvement and HIT. As human populations grow, so do the resource demands imposed on ecosystems, and the impacts of anthropogenic use and abuse are becoming ever more apparent. This has led to the development of the concept of ecosystem services, which describes the beneficial functions provided by ecosystems for human society. Ecosystem services are limited and hence threatened by over-exploitation, and there is an urgent imperative to evaluate trade-offs between immediate and long-term human needs and to take action to protect biodiversity, which is

a key factor in delivering ecosystem services. To help inform decision-makers, economic value is increasingly being associated with many ecosystem services and is often based on the replacement with anthropogenic alternatives. The on-going challenges of maintaining sustainable ecosystems and prescribing economic value to nature is prompting multi-disciplinary shifts in how we recognise and manage the environment. This volume brings together emerging topics in environmental science, making an excellent source for policy makers and environmental consultants working in the field or related areas. Ecosystem Services also serves as a concise and referenced primer for advanced students and researchers in environmental science and management. Especially since the 2003 SARS crisis, China's healthcare system has become a growing source of concern, both for citizens and the Chinese government. China's once praised public health services have deteriorated into a system driven by economic constraints, in which poor people often fail to get access, and middle-income households risk to be dragged into poverty by the rising costs of care. The New Rural Co-operative Medical System (NRCMS) was introduced to counter these tendencies and constitutes the main system of public health insurance in China today. This book outlines the nature of the system, traces the processes of its enactment and implementation, and discusses its strengths and weaknesses. It argues that the contested nature of the fields of health policy and social security has long been overlooked, and reinterprets the NRCMS as a compromise between opposing political interests. Furthermore, it argues that structural institutional misfits facilitate fiscal imbalances and a culture of non-compliance in local health policy, which distort the outcomes of the implementation and limit the effectiveness of insurance. These dynamics also raise fundamental questions regarding the effectiveness of other areas of the comprehensive New Health Reform, which China has initiated to overhaul its healthcare system. The Gambian economy showed strong growth and low inflation during the global crisis under the Extended Credit Facility (ECF), despite a sharp drop in tourism and remittance receipts. Executive Directors appreciated the macroeconomic policy framework and stressed the importance of achieving the MDGs and targets on poverty-reducing expenditures. They encouraged strengthening of fiscal performance to anchor macroeconomic stability and reduce the debt burden. Directors strongly supported tax reform and welcomed budget procedures and their execution. Directors supported recent improvements in debt management and stressed the importance of debt sustainability. This book investigates the impact of EU law and policy on the Member States' higher education institution (HEI) sectors with a particular emphasis on the exposure of research in universities to EU competition law. It illustrates how the gradual application of EU economic law to HEIs which were predominantly identified as being within the public sector creates tensions between the economic and the social spheres in the EU. Given the reluctance of the Member States to openly develop an EU level HEI policy, these tensions appear as unintended consequences of the traditional application of the EU Treaty provisions in areas such as Union Citizenship, the free movement provisions and competition policy to the HEI sector. These developments may endanger the traditional non-economic mission of European HEIs. In this respect, the effects of Union Citizenship and free movement law on HEIs have received some attention but the impact of EU competition law constitutes a largely unexplored area of research and this book redresses that imbalance. The aim of the research is to show that intended and unintended consequences of the EU economic constitution(s) are enhanced by a parallel tendency of Member States to commercialise formerly public sectors such as the HEI sector. The book investigates the potential tensions through doctrinal analysis and a qualitative study focussing on the exposure of HEI research to EU competition law as an under-researched example of exposure to economic constraints. It concludes that such exposure may compromise the wider aims that research intensive universities pursue in the public interest. Andrea Gideon is a Postdoctoral Research Fellow at the Centre for Law & Business (National University of Singapore) for which she has suspended her position as Lecturer in Law at the University of Liverpool. In her current project she is investigating the application of competition law to public services in ASEAN. Her previous research concerned tensions between the economic and the social in the EU with a focus on EU competition law in which research area she earned her PhD at the University of Leeds in 2014. An in-depth guide to the new world of Mobile TV, multimedia networks, and applications. This book constitutes the proceedings of the 2009 International Conference on U- and E-Service, Science and Technology, UNESST 2009, held in conjunction with the International Conference on Future Generation Information Technology, FGIT 2009, on December 10-12, 2009, in Jeju Island, Korea. The FGIT 2009 conference received 1051 submissions in total, of which 301 papers were selected to be presented at one of the events taking place as part of it. The 23 papers presented in this volume were carefully reviewed and selected for presentation at UNESST 2009. They focus on various aspects of u- and e-service, science and technology with computational sciences, mathematics and information technology and recent advances in these areas. The purpose of this manual is to provide an educational genetics resource for individuals, families, and health professionals in the New York - Mid-Atlantic region and increase awareness of specialty care in genetics. The manual begins with a basic introduction to genetics concepts, followed by a description of the different types and applications of genetic tests. It also provides information about diagnosis of genetic disease, family history, newborn screening, and genetic counseling. Resources are included to assist in patient care, patient and professional education, and identification of specialty genetics services within the New York - Mid-Atlantic region. At the end of each section, a list of references is provided for additional information. Appendices can be copied for reference and offered to patients. These take-home resources are critical to helping both providers and patients understand some of the basic concepts and applications of genetics and genomics. A provocative critique of the United States's foreign policy and its experiment in armed nation-building traces the development and shortfalls of current theories about stability operations, militarized foreign assistance and armed humanitarianism. This groundbreaking volume is one of the first to address questions related to the development of producer services in China. The contributions explore a wide range of associated topics including the characteristics of the growth of producer services and how this is related to China's economic and urban transition, the distribution of these services amongst Chinese cities, as well as drawing comparison between producer service development in China and Western counterparts. The text also discusses the dynamics of the development of these services in China and how the political-economic embeddedness of China has shape the development of producer services. Finally, the consequences of this growth and how the economy and urban space have change in response is explored, as well as the challenges Chinese cities face in moving towards a service economy, and how this can inform future public policies. An innovative investigation of the inner workings of Spotify that traces the transformation of audio files into streamed experience. Spotify provides a streaming service that has been welcomed as disrupting the world of music. Yet such disruption always comes at a price. Spotify Teardown contests the tired claim that digital culture thrives on disruption. Borrowing the notion of "teardown" from reverse-engineering processes, in this book a team of five researchers have playfully disassembled Spotify's product and the way it is commonly understood. Spotify has been hailed as the solution to illicit downloading, but it began as a partly illicit enterprise that grew out of the Swedish file-sharing community. Spotify was originally praised as an innovative digital platform but increasingly resembles a media company in need of regulation, raising questions about the ways in which such cultural content as songs, books, and films are now typically made available online. Spotify Teardown combines interviews, participant observations, and other analyses of Spotify's "front end" with experimental, covert investigations of its "back end." The authors engaged in a series of interventions, which include establishing a record label for research purposes, intercepting network traffic with packet sniffers, and web-scraping corporate materials. The authors' innovative digital methods earned them a stern letter from Spotify accusing them of violating its terms of use; the company later threatened their research funding. Thus, the book itself became an intervention into the ethics and legal frameworks of corporate behavior. Firebuy, a specialist body established by the Department for Communities and Local Government to support procurement of kit by Fire and Rescue Services, has cost nearly twice as much to set up and run as the total savings it claims to have delivered. Without the power to make local Fire and Rescue Services use its national procurement contracts, Firebuy has had to rely on persuasion. Progress has therefore been slow with only five out of the 14 framework contracts it has set up being used by more than half Fire and Rescue Services to purchase equipment. Most of the contracts allow suppliers to offer many variations of the same types of equipment, allowing Fire and Rescue Services to procure expensive bespoke equipment, and preventing suppliers offering lower prices through high volume orders. The approach to measuring savings achieved by Firebuy is inadequate and the information that the estimated savings are based on is mostly unreliable. The Department expected Firebuy to be self-financing by its third year of operation (2008-09) but it is still heavily reliant on grants from the Department. Firebuy is expensive to run, with overheads between five per cent and 10 per cent higher than the industry norm. The Department has not shown enough leadership, direction or oversight of Firebuy to ensure it achieved its original objectives, most of which were not

monitored (only 29 of 66 targets were monitored) and many were not met. In recent years, cloud computing has gained a significant amount of attention by providing more flexible ways to store applications remotely. With software testing continuing to be an important part of the software engineering life cycle, the emergence of software testing in the cloud has the potential to change the way software testing is performed. *Software Testing in the Cloud: Perspectives on an Emerging Discipline* is a comprehensive collection of research by leading experts in the field providing an overview of cloud computing and current issues in software testing and system migration. Deserving the attention of researchers, practitioners, and managers, this book aims to raise awareness about this new field of study. Russian multinationals are playing an increasingly important role in the world economy, particularly in some key sectors such as oil, gas and metallurgy. At the same time, Russian multinationals differ in many respects from multinationals from other countries in that they often receive special treatment from the Russian government, and, because of past experiences, international investors are often reluctant to invest in them. This book presents a comprehensive overview of Russian multinationals. It discusses the rise of Russian multinationals, examines Russian multinationals' activities in key sectors, analyses the relationship between Russian multinationals and the Russian government and between Russian multinationals and international investors, and concludes by assessing how Russian multinationals are likely to develop in future.
